

Dear colleague

We are writing following the announcement by the Prime Minister on the relaxation of recommendations on wearing of face coverings in schools and colleges. The joint unions were disappointed at the Government decision as we believe it is premature and risky. However, we want to work with education leaders to ensure the best outcome possible.

In the lead up to this announcement, [we joined with leading scientists and parent groups](#) to call on Government to keep the current face coverings arrangements in place beyond May 17 with a further review at stage 4 of the lockdown roadmap on 21 June.

There is a strong case for continuing with the current arrangements and we would therefore recommend that schools and colleges use the flexibility within the new Department for Education (DfE) guidance to actively encourage students and staff in secondary schools and colleges to continue wearing face coverings in classrooms and communal areas – subject to review in the run up to the next step on the national roadmap from 21 June.

We would encourage leaders to have discussions with staff and seek to address the understandable concerns that they may have. Nobody, whether staff or student, in any part of a primary or secondary school or college, should be prevented from wearing a face covering if they wish to do so.

### **SAGE advice**

Since the publication of our letter, it has become clear that the Government's own [SAGE committee had also advised ministers](#) to keep the face covering recommendation in place beyond 17<sup>th</sup> May.

### **Threat from variants**

We are aware that cases of the B.1.617.2 variant, which is linked to the exponential growth of the pandemic across India and nearby regions, are now being found across England and that this has been identified as a variant of concern in the UK. Cases of this variant, where there is no link to travel or surge testing, are doubling week on week.<sup>1 2</sup> Of greatest concern, several outbreaks have happened in schools,<sup>3 4 5 6</sup> including secondary schools,<sup>7</sup> and have potentially contributed to community spread. For example, we understand cases have risen rapidly among school age children in Bolton within a week. With spread clearly occurring within schools and into the community all across England, it is best to take preventative action now. Despite several requests, the Government has refused to provide us with aggregate data on the total number of variant cases linked to schools.

### **Risks of long Covid to pupils**

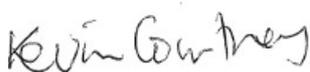

We also know from ONS data that 10 per cent of primary school age children and 13 per cent of secondary school age children have persistent symptoms even five weeks after the initial infection.<sup>8</sup> Between 7-8 per cent have symptoms that persist for at least 12 weeks. Scientists have estimated there are 43,000 children, and 114,000 teaching and educational staff living with long Covid, a syndrome whose impact on children and adults long-term is poorly understood.<sup>9</sup> The ONS data indicates that two-thirds of people with long Covid have some degree of limitation in activity,<sup>10</sup> suggesting that the condition has important impacts on people's day to day lives.

## Face coverings still required in shops and transport

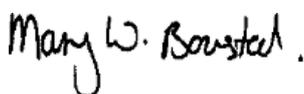

Face masks are still required in other indoor spaces like shops, restaurants, cinemas and transport including dedicated school transport. Schools and colleges should not be stripped of this protection where, despite the best efforts of education leaders, social distancing is near impossible.

We hope you find this letter constructive. We are totally committed to working with you to keep pupils and staff safe and to avoid more children losing out on face-to-face education as result of virus outbreaks. The key lesson of the last 12 months is that we need to take a precautionary approach, particularly when it comes to safeguarding the health, wellbeing and education of pupils.

Yours sincerely

Kevin Courtney
